

Plastic containers (polypropylene, polyethylene)

A.A.H. Plast Ltd. – designs and manufactures polyethylene and polypropylene containers using a unique method, the wrapping method, plastic containers, polypropylene and polyethylene containers (H.D.P.E, P.P).

These materials are resistant to the most aggressive chemicals and temperatures of up to 95 degrees Celsius.

The plastics department operates according to knowledge and standards - T.I. 6102 and DVS 2205. All stages of production are well supervised.

Large plastic containers manufactured by extrusion using compressed plastic strips around a preheated metal cylinder, thus creating a sealed, strong, homogeneous, and seamless plastic container in the cylinder. A durable, strong plastic container of any thickness required according to the preliminary planning carried out by the planning department.

Large plastic containers that include accessories such as flanges, manholes, plungers, ladders and railings according to customer requirements.

The company has a professional and skilled team of workers for field work and installation work.

We specialize in producing containers at an attractive price and using diverse production methods that suit the customer's needs.

Variety of design options:

Horizontal container

Double wall

Open roof

Cone bottom

Sloped bottom
